Getting Started/Logistics (recap)

- Fill out the form at **[in-person only]** now for EC2 instance access
- You'll receive two emails. One from Google Forms and one that looks like →
- Follow the instructions in this one to login to your FireSim manager instance, then wait

Welcome to the FireSim/Chipyard tutorial!

Your Instance IP is 3.86.98.198

Your Instance Username is centos

There are two steps to login:

1) Save the attached key. You will likely need to fix permissions on it like so:

```
chmod 0600 tutorial-user-0000-us-east-1.pem
```

2) Next, there are two options for logging in, choose one. Mosh is highly recommended for easy persistent connections:

2a) If you have mosh installed (or can install it) we highly recommend logging in with mosh. See mosh install instructions here: <https://mosh.org/#getting>

Once installed, to login with mosh, run:

```
mosh --ssh="ssh -i tutorial-user-0000-us-east-1.pem" centos@3.86.98.198
```

2b) If mosh is not available, login with a regular ssh client, then run screen once you're on the instance:

```
ssh -i tutorial-user-0000-us-east-1.pem centos@3.86.98.198
```

[now, start a screen on the remote instance]

Please let a presenter know if you have issues logging in.

A *Golden Age* in Computer Architecture

- No more traditional scaling...
- An architect's dream: everyone wants custom microarchitectures and HW/SW co-designed systems
- Also, a golden age to have *direct impact* as researchers
 - Exploding open-source hardware environment
 - An open-ISA that can run software we care about

<https://cacm.acm.org/magazines/2019/2/234352-a-new-golden-age-for-computer-architecture/fulltext>

A *Dark Age* in Computer Architecture tools

- What do we need to do good architecture research?
 - Need tools that let us evaluate designs on a variety of metrics:
 - Functionality
 - Performance
 - Power
 - Area
 - Frequency
 - Especially in small teams (grad students, startups), these tools need to be *agile*
 - Historically, without good open IP, had to build abstract arch/uarch simulators out of necessity
 - But now, we have much better IP and software compatibility, so what's stopping us?

A *Dark Age* in Computer Architecture tools

- Designed to be operated by hundreds of engineers
- Not, 10s of engineers or 1s-10s of grad students
- Two hard questions:
 - Where do I get a collection of well-tested hardware IP + complex software stacks that run on it?
 - How do I quickly obtain performance measurements for a novel HW/SW system?

Two hard questions, answered!

- Where do I get a collection of well-tested hardware IP + complex software stacks that run on it?

- How do I quickly obtain performance measurements for a novel HW/SW system?

What can I do with these tools?

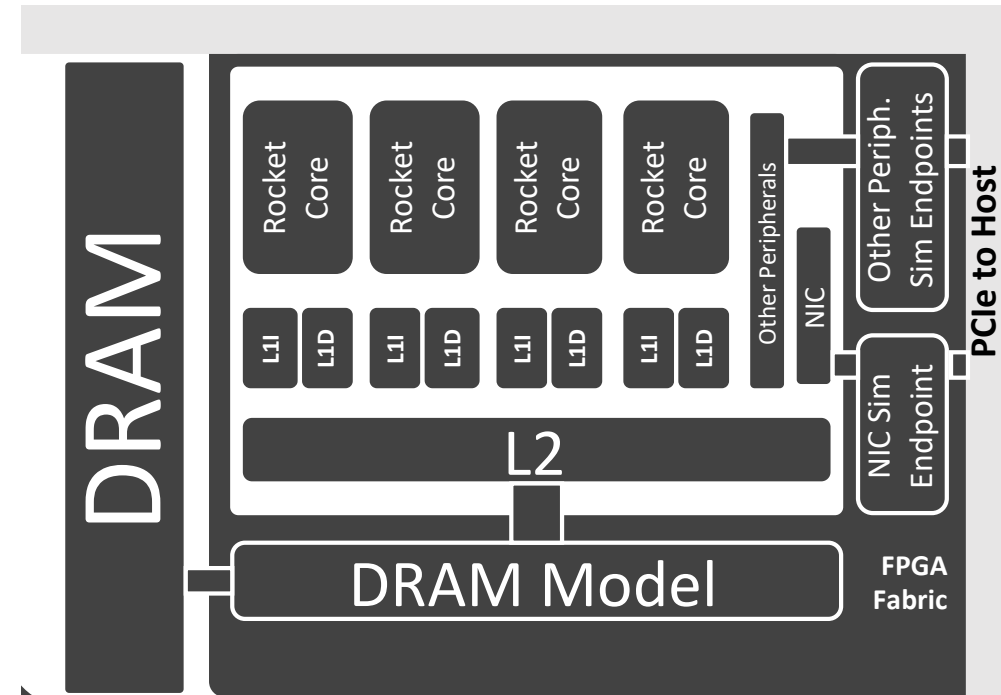

Measure Functionality, Performance, Power, Area, Frequency *for real HW/SW systems,*
quickly and easily, with small teams of engineers

What kinds of designs can I work with?

- RISC-V Cores:
 - Rocket Chip In-Order core, industry proven
 - SonicBOOM Out-of-Order Superscalar core
 - CVA6
 - Ibex
- Accelerators
 - Hwacha Vector Accelerator
 - sha3 accelerator
 - NVDLA (NVIDIA Deep Learning Accelerator)
 - Gemmini (Berkeley DNN Accelerator)
 - FFT Generator
- Peripherals/other IP
 - L2 Cache, UART, Disk, Ethernet NIC, etc.
- FPGA-Simulation Models
 - Large LLCs, large DDR3 memory systems

Single SoC System

What kinds of designs can I work with?

FireSim has been used in published work from authors at over 20 academic and industrial institutions*

**actually used, not only cited*

- IEEE Micro Top Pick Honorable Mention

- DAC '21 Genc et. al.:

- DAC 2021 Best Paper winner

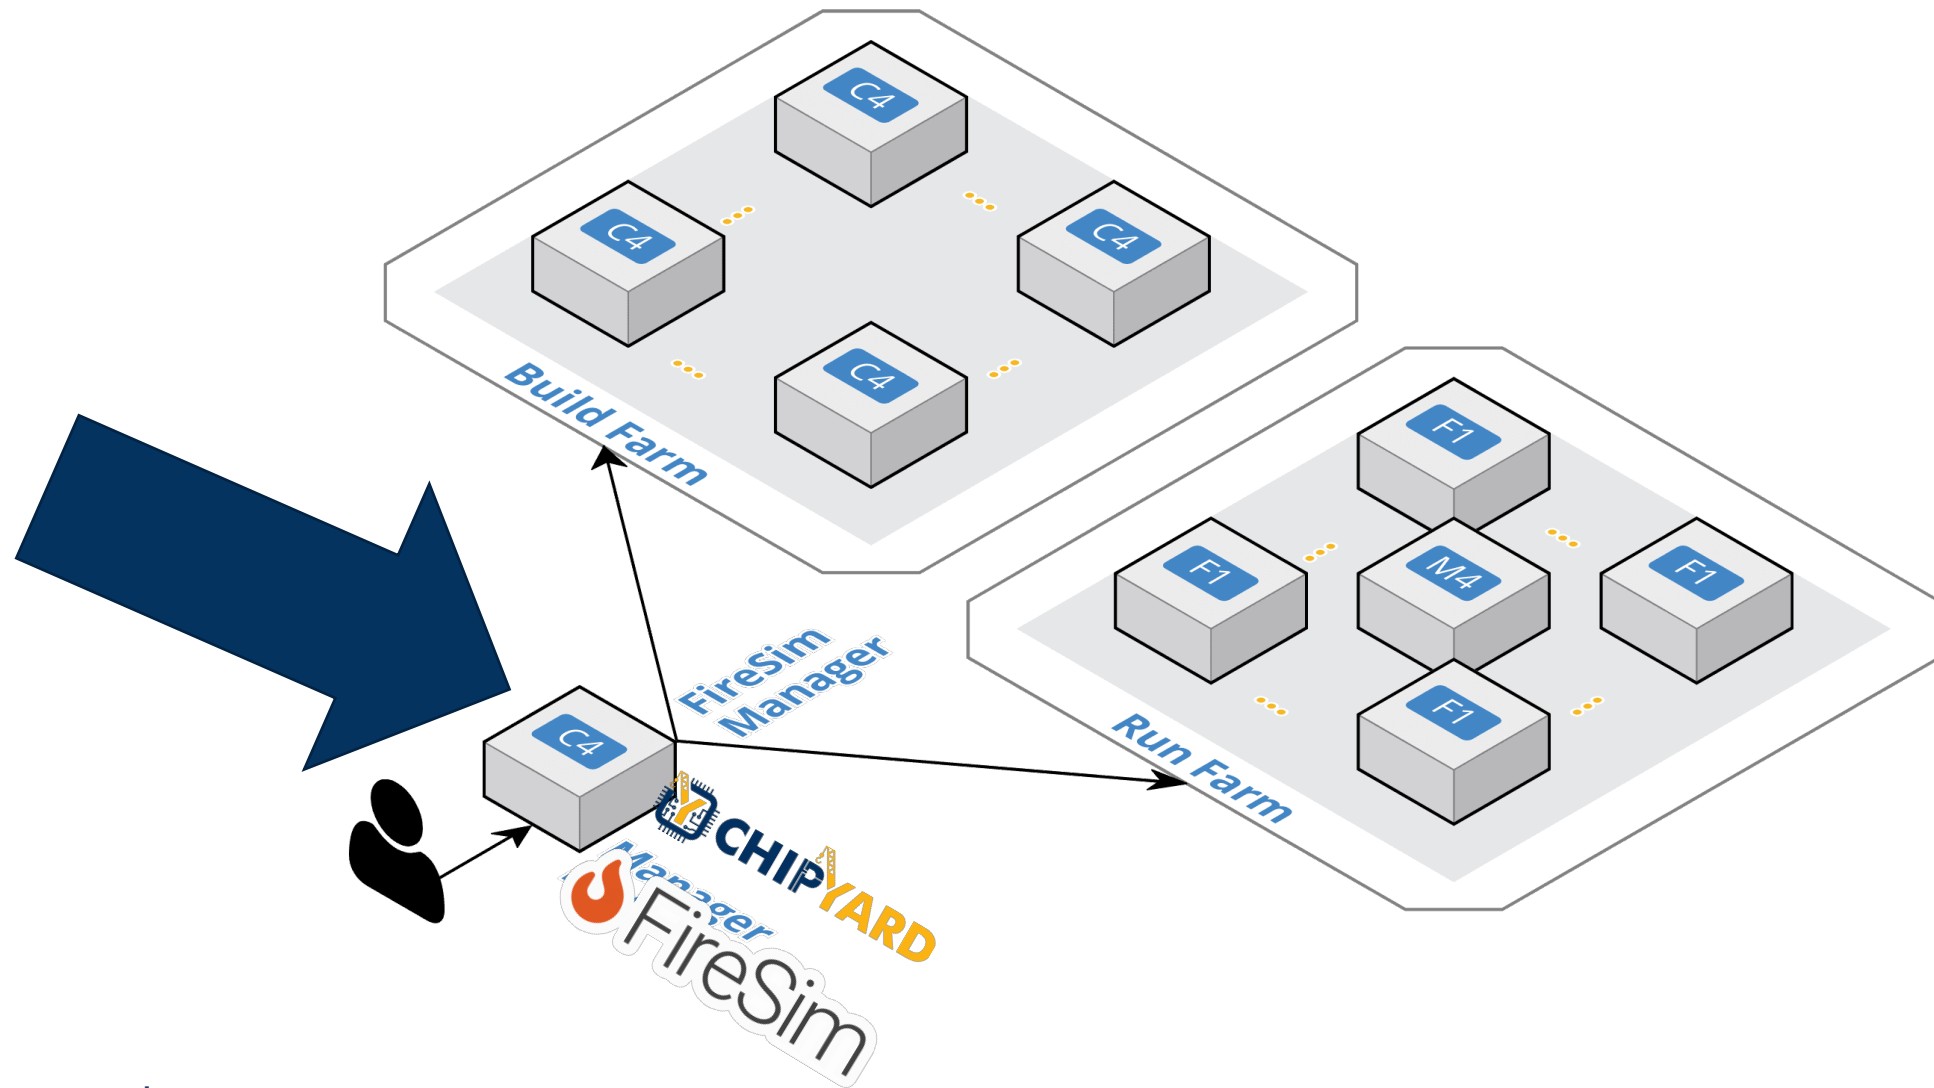

winner

Today's Logistics

You are here

Running a FireSim FPGA Build

- This will take a while, so we will run this in the background:

```
tmux new -s fpgabuild # this will give you a persistent
                      # session you can reattach to

firesim managerinit
```

[When prompted, enter your email address to get a build completion notification]

```
# runs the HW build, all the way to AGFI

firesim buildafi
```

[Lastly, detach from tmux with “ctrl-b d”. We will return to this build later.]
[this will build a design called firesim-singlecore-no-nic-l2-lbp]

Today's Agenda - AM

9:00am: Introduction/Overview, Amazon EC2 Instance Setup, Logistics - Sagar

9:30am: Chipyard Basics – Jerry

10:00am: Building Custom RISC-V SoCs in Chipyard - Jerry

11:00am: Coffee break

11:30am: Hammer VLSI flow - Nayiri

12:00pm: FPGA Prototyping - Nayiri

12:30pm - 2:00pm: Lunch

Today's Agenda - PM

2:00pm: FireSim Introduction - Sagar

2:30pm: Building Hardware Designs in FireSim - Sagar

3:00pm: Building Software Workloads in FireSim - Nayiri

3:30pm: Running a FireSim Simulation: Password Strength Checking on a RISC-V SoC with SHA-3 Accelerators and Linux - Abe

4:00pm: Coffee break

4:30pm: Debugging and Profiling FireSim-Simulated Designs - Abe

5:15pm: FireSim Multi-FPGA Networked Simulation - Abe

5:55pm: Conclusion - Sagar

6:00pm: End of Tutorial
